

Newsletter - August 2016

Webinars

We would like to re-introduce our high-end webinars with a lower price tag (limited time offering).

Starting with our most popular offering, MIL-STD-882E In-depth; this unique educational experience has become very popular. This product provides an intriguing detailed comparison between MIL-STD-882E, MIL-STD-882D, and MIL-STD-882C.

Need more insight in 882E? Attend or book our 3-day MIL-STD-882E system safety course -see below.

Announcement: MIL-STD-882E System Safety Course

Sept. 27-29, 2016
<http://www.hcrq.com/mil-std-882e-system-safety-course.html>

Need for Certification

This seems to be a never-ending issue. We continue to see "system safety engineers" who are far from expert in their chosen field.

This is especially evident in the North American rail industry. Some are knowledgeable of only certain aspects of these systems; some know nothing about software safety; some know nothing about FMEA/FMECA; many are lacking solid expertise in fault tree analysis just to name a few aspects.

How To Get Promoted

This webinar has been very successful and has received many compliments.
