

Newsletter - August Update 2010

Pending Webinar

System Safety Cases

Keep an eye on our home page for the announcement.

Do You Need This?

We received a request from one person for a webinar covering:

- system security program plans &
- threat & vulnerability analysis.

We have the information and experience in this area and are attempting to justify the investment in developing this webinar.

Please contact us if you have an interest in such an offering. Thank you.

SAE ARP4754A

We extend our thanks to Nazan GOZAY GURBUZ, from STM (Turkey), for informing us about the revision to 4754.

The new version is due to hit the streets any time now, perhaps next month.

DO-178B

Although we are fairly sure we have mentioned this before, for those readers who have an interest in this standard (we use the word standard although this is not legally correct), DO-178B is **not** a software safety standard.

SAE ARP4761A

We extend our thanks to John Dalton, chairman of the SAE S-18 committee, for informing us that the work on the revision to 4761 is due to start with an anticipated duration of 2 years.

The next meeting of S-18 is scheduled for September 27 - October 1 in Boston.

Full RSAC Meeting

This meeting is scheduled to take place September 23 at the National Housing Center in Washington, D.C.

HCRQ will be in attendance representing Cattron Group International.

Software Safety Course

September 14-17 - http://www.hcrq.com/software_safety_course.html

Hands-On Fault Tree Analysis Course

October 13-14 - http://www.hcrq.com/fta_2day_course.html

System Safety Course

October 18-22 - http://www.hcrq.com/system_safety_course_5day.html
