Live On-line Course Attendance

Many people are now attending our:

- system safety,
- software safety and
- MIL-STD-882E system safety courses live on-line.

In addition, many are now booking their own dedicated live on-line courses like the one we just taught to an Australian company.

They are also booking dedicated on-site FTA courses.

Fault Tree Analysis Acceptance/Rejection Criteria

We have now distributed 220 copies of this criteria.

www.hcrq.com/fault-tree-analyses---when-to-accept-when-to-reject.html

Forensic Safety Analysis

HCRO's work in this area began many years ago when cancer therapy machines were killing patients.

We have performed 10 forensic safety analyses and are now working on our 11th.

Needless to say, they are very sobering when there has been loss of life.

In those situations where law suits are involved, needless to say the costs of these analyses is miniscule compared with the legal costs.
