Pending Courses

- System Safety
Feb. 27-Mar. 3
U.S. Navy attending
- Hands-On FTA
Pending Announcement
- Software Safety
Apr. 24-27
- MIL-STD-882E
May 23-25

Contact us at training@hcrq.com
regarding discounts.

142 organizations have attended
our courses!

Software Safety Engineers

Similar to system safety engineers, the breadth and depth of the knowledge and experience of software safety engineers can vary substantially.

Some people have experience with software SILs, various preferred operating systems, language subsets, software fault tree analysis, etc.

Software-Caused Accidents

On several occasions we have had the opportunity to perform post-accident analyses for companies whose systems have failed catastrophically often resulting in death. In many situations, out of necessity, the systems continue to be used while we are investigating and analyzing.

Webinars

HCRQ is continuing to offer in-depth webinars in system safety and software safety.

Topics include SSPP, PHA, O&SHA, and many others.
