

To Our Readers

We were busy this month due to the ATCA Conference & Exhibition, our courseware load, and work on various proposals. As a result, this particular issue of our newsletter is brief.

Thank you.

Pending Courses

Upcoming courses next month include:

- Software Safety – Nov. 7-10
- Aviation System Safety – Nov. 21-23

Webinar: Estimating Probabilities of Human Failures

This practical webinar, not based on THERP, HEART, JHEDI, SPAR or CREAM methodologies, is being discontinued in order to make room in our schedule for new webinars.

So if your situation requires you to introduce these types of probabilities in your safety analyses, hurry!

The last offering of this webinar will take place in January 2012.

SAE ARP4761A

S-18 is currently working on SAE ARP4761A. They expect to publish this update in the fall of 2013.

New Course: ATM System Safety

This course covers Air Traffic Management (ATM) System Safety where EUROCONTROL and EUROCAE standards (such as ED-153 and the ESARRs) are applicable.

Typical of our courses, it also covers much more than this.
